

5. Post-mapping actions

Post-mapping work

Now the data collected needs to be synthesized and formatted into the mapping template using the tool you chose in Step 1. It is useful to do this as soon as possible to ensure content is not lost.

When updated, share with those who participated to confirm the accuracy of the content captured. One option is to create a shared folder and add the notes, pictures, and updated maps. This is also a good place to save a digital copy of the sign-in list from the session, as this will allow the teams to stay in touch as they develop their pathways across the institutions.

Checklist

1. Incorporate edits and additions into the pathway maps
2. Incorporate edits and additions into the action plans
3. Create a shared folder, or digital repository, that the whole group can access and include:
 - a. Digital versions of the pathway maps (clearly labeled by institution and sector)
 - b. Digital versions of the action plans (clearly labeled by institution and sector)
 - c. Photos of the maps from the session
 - d. Sign-in sheet from the session: this is important as it will allow attendees to reach out to each after the mapping session
 - e. Any materials and notes that were shared during the session

Remember Mapping is
Iterative...
Enjoy the process
